EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Change the title of the invention to: "Data Transmission Sequencing Method Associated with Bridging Device and Application System" to correction typographical error (misspelling of "Transmission").

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance: In light of the Applicant's arguments filed on 3 September 2005, Claims 1, 8, and 14 are considered allowable, particularly due to the added limitation that the response data is transmitted to the bus as soon as the write data are completely transmitted to the bus, which as noted on page 8 of the Applicant's arguments, means that there is not a delay or idle period on the bus. While prior art has been found that teaches transmitting response data after such write data is transmitted, none has been found that teaches transmitting the response data as soon as such write data is transmitted. This limitation

Art Unit: 2112

distinguishes the invention from the prior art of record, and therefore Claims 1, 8, and 14 are considered allowable.

3. Claims 2-7 are considered allowable based on their dependence on Claim 1.

4. Claims 9-13 are considered allowable based on their dependence on Claim 8.

5. Claims 15-20 are considered allowable base on their dependence on Claim 14.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: U.S. Patent No. 5,740,373 and U.S. Patent Application Publication No. 2004/0168026.
